**FOR YOUR OWN SAFETY, PLEASE READ THIS USER MANUAL CAREFULLY
BEFORE POWERING OR INSTALLING YOUR Divine 160!
Save it for future reference.**

This device has left our premises in absolutely perfect condition. In order to maintain this condition and to ensure safe operation, it is absolutely necessary for the user to follow the safety instructions and warnings written in this manual.

The manufacturer will not accept liability for any resulting damages caused by the non-observance of this manual or any unauthorized modification to the device.

Unauthorized modification will void warranty.

This device is for professional use only. It is not for household use.

1. Safety instructions

DANGEROUS VOLTAGE CONSTITUTING A RISK OF ELECTRIC SHOCK IS PRESENT WITHIN THIS UNIT!

Make sure that the available voltage is not higher than stated on the rear side of the fixture. This fixture should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supplied, consult your authorized distributor or local power company.

Always disconnect the fixture from AC power before servicing or cleaning internally.

Do not overload supply line as this can result in fire or electric shock.

Make sure the power/data cable is never crimped or damaged by sharp edges. Check the fixture and the power/data cable from time to time.

Do not install the unit near an open flame.

Refer servicing to qualified service personnel.

This fixture falls under protection class I. Therefore, this fixture has to be connected to a mains socket outlet with a protective earthing connection.

Do not connect this fixture to a dimmer pack.

Warning! Risk Group 2 LED product according to EN 62471.

LED light emission. Risk of eye injury.

Do not look straight at the fixture's LEDs during operation. The intense light beam may damage your eyes.

The light source contains blue LEDs.

Keep combustible materials at least 0.3 m away from the fixture.

If the fixture has been exposed to drastic temperature fluctuation (e.g. after transportation), do not switch it on immediately. The arising condensation of water might damage your device. Leave the device switched off until it has reached room temperature.

Avoid brute force when installing or operating the fixture.

When choosing the installation spot, please make sure that the fixture is not exposed to extreme heat or dust.

Avoid using the unit in locations subject to possible impacts.

Only operate the fixture after having checked that the housing is firmly closed and all screws are tightly fastened.

Do not block the front glass cover with any object when the fixture is under operation.

The fixture body must never be covered with cloth or other materials.

The fixture becomes very hot during operation. Allow the fixture to cool approximately 30 minutes prior to servicing or maintenance.

Operate the fixture only after having familiarized yourself with its functions. Do not permit operation by persons not qualified to operate the fixture. Most damages are the result of unprofessional operation!

Please consider that unauthorized modifications on the fixture are forbidden due to safety reasons!

Please use the original packaging if the fixture is to be transported.

If this device will be operated in any way different to the one described in this manual, the product may suffer damages and the warranty becomes void. Furthermore, any other operation may lead to dangers like short-circuit, burns, electric shock etc.

2. Fixture exterior view

Rear connection shown

1. Head with LED array
2. Tilt lock
3. Base
4. Cable glands or blind flange (depends on fixture version)
5. Surface Mounting adapter

Note: customer can interchange the cable glands and blind flanges in the fixture base to create a side or rear connection.

3. Installation

3.1 Connection to the mains

***Fixtures must be installed by a qualified electrician in accordance with all national and local electrical and construction codes and regulations.
This device falls under class one and must be grounded!***

To connect the Divine 160 to mains and a DMX controller, use a 5-cored cable Flamar Li9YC11Y. The 3 cores serve for the power supply and 2 shielded cores are intended for DMX connection:

Core	Connection	Core	Connection
Black	Live (L)	Red	Data + (+)
White	Neutral (N)	White	Data – (-)
Yellow/Green	GND PE (⊕)	Shielding	Data ground (0)

1. Unscrew the eight screws (2) on the terminal block cover (1) to get access to the terminal block and control display (6) with four control buttons (7).
2. Unscrew both cable glands (4) from the terminal block cover (1) and both blind flanges (10) from the fixture base.
3. Apply an adequate layer of the paste LOCTITE 5331 on the plastic holder of the cable gland before inserting it into the body of the gland. Apply an adequate layer of the paste LOCTITE 577 on the thread of the gland body. Screw both cable glands (4) back into the terminal block cover (1) - see the picture below.
4. Apply an adequate layer of the paste LOCTITE 577 on the thread of the blind flange. Screw both blind flanges (10) back into the fixture base.

5. Pass the power/data cable through one cable gland (4) and connect to the terminal block.
 6. Remove end cap (3) from cable glands before passing cable into the terminal block compartment. The two cable glands serve for cables of diameter of 5-10 mm.
- To keep declared IP rating, every cable gland has to be covered with an end cap (3) if the cable gland is not used for cable passing.

Divine 160

Note: If you are interchanging cable glands (4) and blind flanges (10), do not forget to apply LOCTITE 5331 and 577 on cable glands and LOCTITE 577 on blind flanges.

7. After connecting cables and setting the fixture by means of the control display and four buttons, place the cover (1) on the terminal block back, make sure the seal (5) is inserted correctly.
8. Screw the terminal block cover (1) with eight screws using a tightening torque of 7Nm.
9. Check that all cable glands and screws and blind flanges are firmly secured.

Rear connection shown

Side connection shown

Base technical features of the ABB terminal block:

Type: DS 2,5/10.4L (4 springs mini blocks)

Parameter	IEC	UL/SCA
Rated voltage	800 V	600 V
Rated current	24 A	15 A
Wire size rated/gauge	2.5mm ² /A2	12AWG
Wire stripping length	9.5 mm	

3.2 Mounting the fixture

The Divine 160 can be arranged in any position/orientation without altering its operation characteristics. The LED module can be tilted to desired position by means of the tilt lock. Use an Allen key 6 to adjust desired tilt position.

Screw the surface mounting adapter (11) to the base of the fixture by means of the six screws M8x20 (8). Four slots (9) in the surface mounting adapter serve for mounting on a non-flammable flat surface via four screws.

Ensure that the structure to which you are attaching the fixture is secure.

Caution: Overhead installation requires experience. Fixtures may cause severe injuries when crashing down! If you have doubts concerning the safety of a possible installation, do not install the device and consult installation with an expert.

5. Control menu

The Divine 160 is equipped with a 4-segment LED display which allows you to set the fixture's behaviour according to your needs, obtain information on its operation, control all range of effects and program it in stand-alone mode.

The four control buttons have the following functions:

- ↖ - ESCAPE button-leaves menu without saving changes.
- ↵ - ENTER button- enters menu, confirms adjusted values and leaves menu.
- ▲ - UP and ▼ - DOWN buttons - move between menu items on the same level, sets values.

After switching the fixture on, display shows current DMX address.

A001

5.1 Fixture Address

A001

Use this menu to set the DMX address of the fixture.

dM.Ad. --- **DMX addressing.** Select this submenu to set a DMX start address.

To set a DMX address.

1. Use UP/DOWN buttons to find "A001" menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select desired start address.
4. Press the ENTER button to confirm the choice.

Note: After switching on, the Divine 160 will automatically detect whether DMX 512 data is received or not. If there is no data received at the DMX input, the display will start to flash the set address.

DM.Pr. --- **DMX preset.** Select this menu item to set a desired DMX mode.

5.2 Fixture information

Info

Use this menu to read useful information about the fixture status.

To display desired information.

1. Use the UP/DOWN buttons to find the "InFo" menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select the required menu item.
4. Press the ENTER button to confirm the choice.

Po.ti. --- **Power On Time.** Use the menu item to read the number of operation hours of the fixture.

totL - the function shows the total number of the operation hours since the Divine 160 RGBW has been fabricated.

rESEt - the function shows the number of the operation hours since the counter was last reset.

In order to reset this counter to 0, you have to press and hold the UP and DOWN buttons and at the same time press the ENTER button.

VErS. --- **Software Versions.** Select this function to read the software version of the fixture processors.

- IC1.b.** --- display processor 1
- IC2.b.** --- display processor 2
- IC3.L.** --- LED processor 3
- IC4.L.** --- LED processor 4
- ViFi** --- Wireless DMX module (if installed)

tEMP --- **Fixture Temperatures.** Select this menu to read the temperatures of the fixture:

bASE

- Cur.t.** --- the current temperature of the fixture base.
- Hi.tE.** --- the menu item shows the max. temperatures of the fixture base since the fixture has been fabricated.
- rSEt** --- the menu item shows the maximum temperatures of the fixture base since the counter was last reset. In order to reset this counter to 0 you have to press and hold the UP and DOWN buttons and at the same time press the ENTER button.

LEdS

- Cur.t.** --- the current temperature of the fixture LEDs PCB.
- Hi.tE.** --- the menu item shows the max. temperatures of the LEDs PCB base since the fixture has been fabricated.
- rSEt** --- the menu item shows the maximum temperatures of the LEDs PCB since the counter was last reset. In order to reset this counter to 0 you have to press and hold the UP and DOWN buttons and at the same time press the ENTER button.

The temperatures can be displayed in either °C or °F units - see option "tnP.u." in the menu "Pers".

DM.In.---**DMX values.** Select this function to read DMX values of each channel received by the fixture.

5.3 Personality

Use this menu to modify the Divine 160 operating behaviour.

DM.Pr. --- **DMX preset.** Select this menu item to set a desired DMX mode. Please refer to the chapter "DMX protocol" for detail description of each DMX mode.

dM.In. --- **DMX input.** Select this menu item to select desired DMX input:

- UirE** --- Wired DMX.
- UirL** --- Wireless DMX
- UrLo** --- Wireless DMX → wired DMX. The fixture receives wireless DMX signal and sends it to its DMX output connector. Next fixtures can be connected to this fixture by DMX cable (fixture works as a Wireless-DMX converter).
- AnL.d.** --- Analog dimmer. If this option is selected, the dimmer channel can be controlled via DC voltage (0-10V) connected between pins 1 (data ground) and 3 (Data +) of DMX input of the fixture (0-data ground, 10V-data +).
 Procedure of setting:
 1. Set fixture's channels at desired values (by means of menu item Init Positions "In.Po").
 2. Disconnect DMX controller
 3. Select option "AnL.d." from menu DMX input

4. Connect DC voltage to the DMX input of the fixture

F.tin. --- **Max. Fade time.** Select this menu item to set a desired max. fade time (0-25.4 sec.). This adjusted fade time influences fade of Red, Green, Blue, White and dimmer during DMX operation:

If time between two receiving DMX values is > than fade time set in the item "F.tin.", the entire adjusted fade time will be used.

If time between two receiving DMX values is < than fade time set in the item "F.tin.", the adjusted fade time will be reduced to fill entire time between the two receiving DMX values.

e.g "F.tin."=2sec. and fixture has received from DMX controller value Red=0 DMX, after 5 seconds will receive Red=255 DMX. It means, that red will go to full intensity during 2 seconds.

"F.tin."=8 sec. and fixture has received Red=0 DMX, after 5 seconds will receive Red=255 DMX. It means, that red will go to full intensity during 5 seconds. (Max. fade time is reduced from 8 sec. to 5 sec.).

DISP. --- **Display adjusting.** This function allows you to change the display settings.

d.On --- this function allows you to keep the display on or to turn off automatically 2 minutes after pressing any button on the control panel.

d.Int. --- select this function to adjust the display intensity (6-min.,100-max.).

turn --- select this function to rotate menu 180 degrees from current orientation.

C.CL.n. --- **Colour calibration.** If the function is on, the white output (R+G+B+W=full, Whites 2700K,3200K, 4200K, 5600K and 8000K) from the fixture is more uniform.

C.MI.n. --- **Colour mixing mode.** This menu item allows to select desired colour mixing mode:

rGBU --- RGBW mode

CMY --- CMY mode (the white channel is not active in this mode)

diM.C. --- **Dimmer curve.** The menu item allows to select desired dimmer curve:

Lin. --- linear

SqL --- Square law

Uhl.C. --- **White counting.** If this function is on, the white channel uses red, green and blue channels in proportional relation to ensure max. light output in a white colour (if white channel =full, also red, green and blue channels are full).

tnP.u. --- **Temperature unit.** Use this menu in order to display the fixture temperatures in desired units: °C or °F.

In.Po. --- **Init effect positions.** Use this function to set all effects to the desired positions to which they will move after switching the fixture on (if DMX is not receiving).

dF.SE. --- **Default Settings .**The menu item sets all fixture parameters to the default (factory) values.

5.4 Manual mode

Use this menu to control all channels via buttons of the control board.

Items in this menu depend on selected DMX mode.

To control fixture channels.

1. Use the UP/DOWN buttons to find “ Man.C” menu.
2. Press the ENTER button.
3. Use the UP/DOWN buttons to select desired effect (channel).

List of control channels:

“Func” – a channel Special Functions

“rEd.1” – a red LEDs saturation coarse- zone 1

“GrE.1” – a green LEDs saturation coarse- zone 1

“bLU.1” – a blue LEDs saturation coarse- zone 1

“Vhl.1” – a white LEDs saturation coarse- zone 1

“rEd.2” – a red LEDs saturation coarse- zone 2

“GrE.2” – a green LEDs saturation coarse- zone 2

“bLU.2” – a blue LEDs saturation coarse- zone 2

“Vhl.2” – a white LEDs saturation coarse- zone 2

“rEd.3” – a red LEDs saturation coarse- zone 3

“GrE.3” – a green LEDs saturation coarse- zone 3

“bLU.3” – a blue LEDs saturation coarse- zone 3

“Vhl.3” – a white LEDs saturation coarse- zone 3

“rEd.4” – a red LEDs saturation coarse- zone 4

“GrE.4” – a green LEDs saturation coarse- zone 4

“bLU.4” – a blue LEDs saturation coarse- zone 4

“Vhl.4” – a white LEDs saturation coarse- zone 4

“Cto” – a colour temperature correction

“Vir.C.” – a virtual colour wheel

“Stro.” - a strobe/shutter

“dir” - a coarse dimmer

“din.F” a fine dimmer

4. Press the ENTER button and use the UP/DOWN buttons to set value , press the ENTER button to confirm it.

5. 5 Test sequences

Use this menu to run demo-test sequences without an external controller, which will show you some possibilities of using the Divine 160.

5.6 Stand-alone setting

The fixtures on a data link are not connected to the controller but can execute pre-set programs which can be different for every fixture. “Stand-alone operation” can be applied to the single fixture or to multiple fixtures operating synchronously.

Auto. --- Automatic playback. This function allows you to select the program which will be played after switching the fixture on. Selected program will be played continuously in a loop.

1. Use the UP/DOWN buttons to select test program ("tEst"), user program ("u.PrG") or disable this function (OFF).
2. Press the ENTER button to confirm the choice.

PLAY --- Playing program. Entering this menu provides a complete overview of all programs offered, from which the selected program can run.

1. Use the UP/DOWN buttons to select desired program.
2. Press the ENTER button. The selected program runs in a loop.

Edit --- Editing a program. The fixture offers a freely editable program up to 40 steps. Every program step includes a step time-the total time occupied by the step in the program and a fade time- during which effects move to new positions.

1. Use the UP/DOWN buttons to select a desired program step ("St.01" - "St.40") and press ENTER button.
2. Use the UP/DOWN buttons to select a channel you want to edit and press the ENTER button.

List of editable items:

"P.End" - a total number of the program steps (value 1-40). This value should be set before start of programming (e.g. if you want to create a program with 10 steps, set P.End=10).

"Func" - a channel Special Functions

"rEd.1" - a red LEDs saturation coarse- zone 1

"GrE.1" - a green LEDs saturation coarse- zone 1

"bLU.1" - a blue LEDs saturation coarse- zone 1

"Vhl.1" - a white LEDs saturation coarse- zone 1

"rEd.2" - a red LEDs saturation coarse- zone 2

"GrE.2" - a green LEDs saturation coarse- zone 2

"bLU.2" - a blue LEDs saturation coarse- zone 2

"Vhl.2" - a white LEDs saturation coarse- zone 2

"rEd.3" - a red LEDs saturation coarse- zone 3

"GrE.3" - a green LEDs saturation coarse- zone 3

"bLU.3" - a blue LEDs saturation coarse- zone 3

"Vhl.3" - a white LEDs saturation coarse- zone 3

"rEd.4" - a red LEDs saturation coarse- zone 4

"GrE.4" - a green LEDs saturation coarse- zone 4

"bLU.4" - a blue LEDs saturation coarse- zone 4

"Vhl.4" - a white LEDs saturation coarse- zone 4

"Cto" - a colour temperature correction

"Vir.C." - a virtual colour wheel

"Stro." - a strobe/shutter

"dinr" - a coarse dimmer

"din.F" a fine dimmer

"F.tin" a fade time

"S.tin" a step time

"COPY" - this item duplicates the current prog. step to the next prog. step.

Note: Items in this menu depend on selected DMX mode.

3. Use the UP/DOWN buttons to set a DMX value of the channel and then press the ENTER button.
4. Use the UP/DOWN buttons to select next channel and press the ENTER button.

- After having set all channels in the current program step, press the ESCAPE button to go one menu level back and select another program step.

5.7 Special functions

rdM.L --- **Code.** This menu item shows the first part of the RDM identification code.

rdM.H --- **Code.** This menu item shows the second part of the RDM identification code.

ViFi --- **Wireless DMX.** The menu serves for reading of the wireless operation status (only for Wireless DMX version).

50 --- **Wireless DMX signal intensity.** The menu item shows level of received signal in %. If the fixture is not linked to the transmitter, "niSS" is displayed.

UnLI --- **Wireless DMX unlink.** The item serves for unlinking the fixture from transmitter.

Adj --- **Effect Adjustment.** The menu allows calibration of white colours.

dMH --- **DMX Values.** The menu item allows to set desired colour before calibrating of white colours.

C.CAL --- **Colour calibration.** Calibration of white colours.

LOA.C. – Loading a default (factory) calibration.

uPd.M. --- **Updating mode.** The menu item allows you to update software in the fixture via either serial or USB port of PC.

The following are required in order to update software:

- PC running Windows 7/8/10 or Linux
- DMX Software Uploader
- Flash cable RS232/DMX P/N.13050624 (if you want to use serial port of PC)
- Robe Universal Interface (if you want to use USB port of PC)

Note: Software update should be executed by a qualified person. If you lack qualification, do not attempt the update yourself and ask for help from your Anolis distributor.

DMX address, user program and all items in the menu "PerS" will be set to their default (factory) values.

To update software in the fixture:

I. Installation of the DMX Software Uploader.

- DMX Software Uploader program is available from the Anolis web site at WWW.anolis.cz.
- Make a new directory (e.g. Anolis Uploader) on your hard disk and download the software to it.
- Unpack the program to the directory.

II. Fixture software updating.

1. Determine which of your ports is available on your PC and connect it:

- with the DMX input of the fixture if you are using the flash cable RS232/DMX
- with the DMX output of the Robe Universal Interface if you are using the USB cable.

Disconnect the fixture from the other fixtures in the DMX chain. Turn both the computer and the fixture on. Make sure the lamp is switched off (only if the fixture involves a lamp).

2. Switch the fixture to the updating mode by selecting the "uPd.M." item and then selecting "yES".

Note: If you do not want to continue in software update, you have to switch the fixture off and on to escape from this menu.

We recommend canceling all running programs before starting the Software Uploader.

3. Run the Software Uploader program. Select desired COM and then click on the Connect button. (Select COM if the serial port is used or Robe Universal Interface if the USB port is used).

If the connection is OK, click on the "Start Uploading button" to start uploading. It will take several minutes to perform software update.

If the option "Incremental Update" is not checked, all processors will be updated (including processors with the same software version).

If you wish to update only later versions of processors, check the "Incremental Update box".

Avoid interrupting the process. Update status is being displayed in the Info Box window.

When the update is finished, the line with the text "The fixture is successfully updated" will appear in this window and the fixture will reset with the new software.

Note: In case upload process is interrupted (e.g. power loss), the fixture stays in "Updating mode" and you will have to repeat the software update again.

6. Technical specifications

Power supply

- Electronic auto-ranging
- Input voltage: 100 - 277V AC, 50-60 Hz
- Max. power consumption: 440W
- Inrush current: 30A (at 230V), 20A (at 115V)

Optic & Effects

- Light source: 40 x RGBW multi-chip LED (RGBW version)
40 x SW multi-chip LED (SW version)
40 x Single colour LED (SC version)
- Beam angle: 16°, 24°, 41° (for RGBW version)
13°, 24°, 39°(for SW/CW/CW version)
- 4 LED zones
- RGBW colour mixing
- Built-in colour macros
- Adjustable strobe sequences
- Typical Lumen maintenance: 70% @ 60, 000 hours

Control

- Setting & Addressing: 4-segment LED display & 4 control buttons
- Control: USITT DMX 512 (RDM support)
- DMX protocol modes: 2 (10,22 control channels)
- Operations modes: DMX, Stand-alone
- Manual control of all effects via control panel
- One editable program, up to 40 steps

Wireless DMX/RDM module (only for wireless DMX version of the Divine 160)

- Compliance with USITT DMX-512 (1986 & 1990) and 512-A
- Full DMX fidelity and frame integrity
- Auto sensing of DMX frame rate and frame size
- <5ms DMX latency
- Operational frequency range of 2402-2480 MHz
- Producer: LumenRadio

Strobe

- Strobe effect with variable speed (max. 20 flashes per second)
- Pre-programmed random strobe pulse-effects

Dimmer

- Smooth 16-bit dimming from 0 - 100 %

Connection

- ABB terminal blocks, type: DS 2,5/10.4L (4 springs mini blocks)
- Recommended data/power cable: Flamar Li9YC11Y cable 3xAWG16+1x(2xAVG24 shielded and jacketed)
UL Style 20233 O.D. 8.4mm, (P/N 13051508)

Mounting

- Via surface mounting adapter

Protection factor

- EU: IP 67
- US: Suitable for wet location

Impact rating

- IK10

Temperatures

- Operating Ambient Temperature: -20°C / +40°C (-4°F / +104°F)
- Operating Temperature: +75°C @ Ambient +40°C (+167°F @ Ambient +104°F)

Minimum distances

Min. distance from flammable material: 0.3 m

Total heat dissipation

- 1500 BTU/h (calculated)

Weight

- 14.5 kg

Dimensions

mm [inch]

Included items

- 1 x Divine 160
- 1 x Surface mounting adapter (P/N 11015860)
- 1 x User manual

Optional accessories

- Set of rubber feet silver (P/N 10980371)
- Top hat Divine 160 silver (P/N 10980357)
- Half top hat Divine 160 silver (P/N 10980358)
- Wire Guard/Anti-Glare Divine 160 silver (P/N 10980359)
- Wire Guard/Anti-Glare Divine 160 black (P/N 10980384)
- Wire Guard/Anti-Glare Divine 160 silver (P/N 10980359)
- Barn Door Module for Divine 160 black (P/N10980380)
- Barn Door Module for Divine 160 silver (P/N 10980378)
- C-Clamp Adaptor Divine silver (P/N 10980363) - Side connection only
- C-Clamp Adaptor Strobe IP/Divine, black (P/N 10980324) - Side connection only

7. Cleaning and maintenance

DANGER !
Disconnect from the mains before starting any cleaning or maintenance work

Rinse off loose dirt with low pressure water spray. Wash the housing with a soft brush or sponge and a mild, non-abrasive washing detergent. Rinse it.

Maintenance and service operations are only to be carried out by a qualified person. Should you need any spare parts, please use Anolis OEM parts.

7.1 Replacing a fuse

This replacement has to be done by a qualified person or Anolis service worker only.

7.2 Disposing of the product

To preserve the environment please dispose or recycle this product at the end of its life according to the local regulations and codes.
